

5

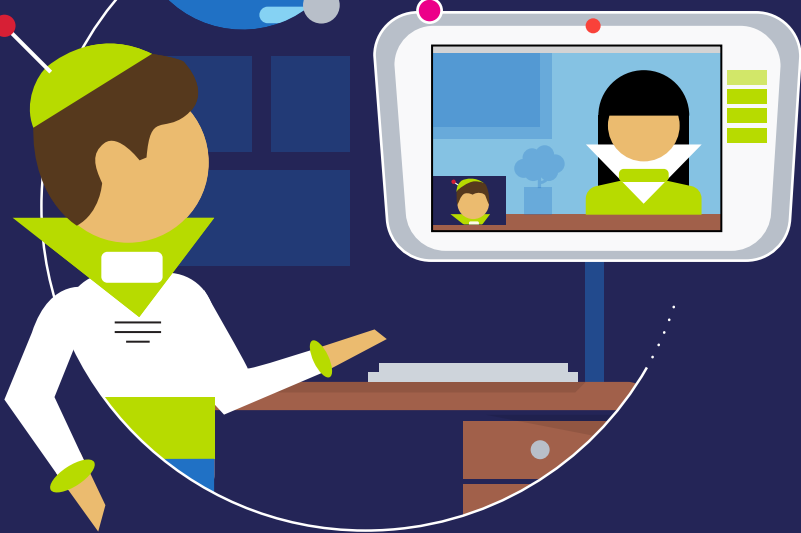

WAYS TO ACCELERATE AWS ADOPTION WITH CITRIX NETWORKING

Whether you are running hybrid, cloud-first, or cloud-scale applications, Citrix provides better experience, performance, and security for your network.

1 Deliver Quality Experiences

Give users across all locations reliable access to high performance applications and content – even during network outages.

2 Simplify Your Hybrid Cloud with Operational Consistency

Centrally configure and manage your cloud network with the same functionality and operational experience you're used to on-premises.

3 Be Agile to Meet Evolving Needs

Handle unpredictable swings in application traffic with elastic scaling and pooled capacity licensing. Bring your existing Citrix licenses to AWS.

4 Secure Your Applications and APIs

Protect customer facing apps with integrated, comprehensive L3 to L7 security and security policy consistency across hybrid cloud.

5 Accelerate Microservices-based Application Adoption

Deliver microservices-based applications with great experience, performance, and security. Integrate with Kubernetes and other popular open source environments and tools.

Deliver better application experience, security, and performance in a hybrid, cloud-first world.
